Stripe diffusers

Avedøre RA

Nakskov RA

BioMizing represents the Austrian supplier of high-quality stripe diffusers on the Danish market.

Aerostrip strip diffusers are among the best diffusers on the market, which ensure the most energy-optimal aeration.

The front page shows the two types of diffusers Aerostrip produces type Q which is made of PVC and type T which is made of acid-resistant steel, both are fitted with a polyurethane membrane.

The special membrane perforation ensures that Micro bubbles are created which ensure the optimal oxygen transfer to the water.

Both types of diffusers are supplied in lengths from 0.5-4.0m.

We are available for further information.
