Filtration equipment

Type SF

Type SFK

The Salsnes filter is a high-tech quality filter that filters, separates and dewateres sludge particles without the use of chemicals.

Salsnes filters are used for a wide variety of applications for filtering process water from industrial and municipal wastewater, for the process and food industry.

Salsnes filter is supplied in different sizes, both as type SF which is a complete unit, and SFK which is a unit which is used in concrete or plastic tanks, all steel is supplied as standard in acid-resistant steel EN1.4404.

Contact BioMizing for further information regarding optimized filtration solutions, regardless of whether it is a stand-alone machine or a complete process plant with sludge transport, pumps, and controls

For more information see Salsnes general brochure (GB)
