BM-TILT: Safe handling of pallet tanks

BM-TILT with pallet tank

BM-TILT, handled with stacker

A safe working environment 😊

BM-TILT ensures that the pallet tank is completely emptied, whether a suction lance is used, or the tank is emptied via the bottom valve.

BM-TILT is a newly developed manual hydraulic handling and tilting device for pallet tanks.

BM-TILT can be handled using a truck, stacker or forklift and the tilting function is easily performed using the built-in hydraulic jack. At the same time, an edge prevents the pallet from slipping.

BM-TILT is made from aluminum and is available in 2 sizes:

- BM-TILT / EU 80x120
- BM-TILT / XL 100x120

BM-TILT is CE marked.
